e of Us	So the foster cans deliver the best combo of penetration and trauma is that true?	
ng	If so they could be a good skull crusher bullet and get a desirable level of damage for other shots. The radius edge # 13 bullet with a tad more meplat could be a Texas brain shot bullet. Maybe try to line up the heart on the path too.

One of our pals here on terminals is going buffalo shooting in a couple of weeks, Austringer! Austringer had a few questions about the bullet he was going to use, a 458 caliber 450 North Fork Bonded Core bullet. Two issues, one was the lower velocity of his double in 450 NE and then a 458 Lott also. I advised to use the North Fork in both. His velocity in the 450 Ne is 2125 fps at the muzzle, and I advised anything from 2250 to 2300 in the 458 Lott, and that both velocities would do just dandy on buffalo. But to put it to rest I requested he send 4-5 bullets and I would target those velocities and we would test them for him. He did. I did!

്

lide Pos

Not sure what I like best just yet, the damn box, or the bullets? I used the 458 B&M to target the velocity of the 450 NE at 2125 fps, I came pretty damn close.

458 B&M 1:14 Twist Rate 450 North Fork Bonded Core Muzzle Velocity 2117 fps 22 Yd Impact Velocity 2058 fps 19 Inches Total Penetration Retained Weight 446 & 445

458 B&M 1:14 Twist Rate 450 North Fork Bonded Core Muzzle Velocity 2117 fps 22 Yd Impact Velocity 2058 fps 19 Inches Total Penetration Retained Weight 446 & 445

e of Us Justice 22 August 2010 05:23 Total Austringer Austringer Vision Vision Vision Second 22:300 as they were 4 22:22.5 I suspect you will get the attention of any buffalo you bust with the North Fork. Issted it to make sure the velocity was good and the rest is history. I missed the velocity in the 458 B&M, then loaded 1 North Fork, tested it to make sure the velocity was good and the rest is history. I missed the velocity in the 458 B&M, then loaded 1 North Fork, tested it to make sure the velocity was good and the rest is history. M.R.	It's because Geoff is getting CHEAP! 🤤	
	Kidding of course.	
	I got these from Midway! They have them in stock. I got 450 gr 458s and 286 9.3s. Bought and paid for.	
	They drove straight and true, exactly as designed, and like a cup point is supposed to do, not as deep penetration as a FN.

	I love the way North Fork pack their bullets in styro and Macifej packs his bullets. Woodleigh bullets look like generic food labeling.	
	Simple can be elegant or ugly but Woodleigh needs to throw their packing in the billabong. Maybe take the same marketing ideas from "Thunder from Down Und	er"

	Well, there you go, that says it all! Put the hydros in a North Fork box, and it's magic from then on! Hey, I know, I have probably several hundred .4725 (caliber 500 gr
	Woodleigh FMJ, I will send them to you, put them in the North Fork Box for 1 week, then try them and see how they do?	
	That would be the Ultimate Box test!	see the
	Ok, more serious note. As you see from last weeks tests of the Hydros and the North Forks, 458 caliber 450s each and 366 caliber 286s each. In both ca North Forks did what they were supposed to do, deep and straight, the Hydros did what they were supposed to do as a cup point, not as deep, but still straight. There was a significant difference in the depth of penetration of the North Fork FPS and the Hydro CPSExactly as there should have been.	l dead
	The difference that you and I are looking at is our mix we each use. Yours straight up news print and mine about 30-35% catalogs/magazines. My mix is more dense, than straight wet print. Basic behavior not much difference between the two, but a builet can do some better in the straight wet print than catalogs and magazines. As you and I have discussed in the beginning when you started testing your own.	just a bit the mix of
	10 Days! I expect big things from you young fellow! You have no excuses now! Don't go over there and make me ashamed of you! You have the right bu caliber, velocity, and you shoot well enough, no alibis now! You must wear proper attire! I expect photos of you and dead critters in the proper manner! because you have done your homework now!	ullet, a good Big Smile,
	Can't wait to get the reports!!!!!!!!! We are all going to be with you there!

You know better than to ask me how much penetration I want! Give me 5 feet, I am gonna want 6 feet! All I ask for is 3 things of my bullet, Penetration, Penetration! No man, the hydros I tested last week did very well. Dead straight too. I was a little surprised that they did not go off course just slightly at the end, bu not. They maintained stability right to the end. I was a little disappointed that I could not see any difference in trauma transfer between the hydros and the North Forks. I actually expected a little mor medium, but if it was there, I could not see it. I know you boys are really proud that you have now entered into the world of Modern Solids, as written by Woodleigh, not me! As well you should be, it Congratulations. I also see from the literature that they are worlds of Modern Solids, as written by Woodleigh, not me! As well you should be, it	Hide F
	posted 25 August 2010 02:41 500N I believe what you say about penetration on buffalo, easy. If my calibration is anywhere close then you should be getting something along the lines of 5 penetration in animal tissue with the hydros! Does that sound about right? Close, in the ballpark? You know better than to ask me how much penetration I want! Give me 5 feet, I am gonna want 6 feet! All I ask for is 3 things of my bullet, Penetration, Penetration! 	@)
	You know better than to ask me how much penetration I want! Give me 5 feet, I am gonna want 6 feet!
	No man, the hydros I tested last week did very well. Dead straight too. I was a little surprised that they did not go off course just slightly at the end, but
	they did not. They maintained stability right to the end. I was a little disappointed that I could not see any difference in trauma transfer between the hydros and the North Forks. I actually expected a little
	more damaged medium, but if it was there, I could not see it.
	I know you boys are really proud that you have now entered into the world of Modern Solids, as written by Woodleigh, not me! As well you should be, it's time! Congratulations. I also see from the literature that they are working on a steel cap for the Hydro? I would assume that would be to harden the builters tip? Possibily three has been some deformation of the cup? Did I also see that a version was coming with a 'flat Nose', no cup??? There are
	reasons for these two improvements.
	I will make it a point to do a TRex on the 458 and 9.3 versions sometime this week. Remember 500NPenetration is Everything
	Michael
	Mike
	5 - 5.5 ft - easy for a Hydro. Because they don't "open up" like a Woodleigh SN, they tend to exit on side on shots on Buff (from what I have seen) whereas because
	you have a large frontal area on an opened up SN (ie my 500/465), this tends NOT to punch through the skin on the off side.
	"steel cap for the Hydro ?" The Original test bullets all had steel caps screwed on - I carried one for 2 weeks but no buffalo would stand end on to me to allow a test so they all died with SN.
	I am not sure what they are doing with them (steel caps) in the future.
	"some deformation of the cup?"

n th	Yep. Might have to pay Jay a 25 cent per bullet licensing fee for his patented SHARCC fin crimp driving band design. It is pretty cool and birthed here on AR thought maybe get rid of a few of the lower bands and best in copper with a petal design. If the brass one breaks open the bullet might reverse in media.

	Well then my calibration was pretty close at 5-5.5 feet. Excellent, means I am pretty close on track.	
- W -	I read about the steel cap briefly yesterday on the website.	
	I don't know that the hydro would deform, I am mostly just curious as to if it could is all. That's the reason for the T'Rex block test I do for construction. I w see if it would deform and how that would effect penetration.	ould like to
	Capoward	
	I knew I could draw you out! Yes that is a pretty good looking bullet Sam cooked up! I don't have them yet, I suppose Bastard Bullet Works just cooked th the last day or so? If I get my hands on a few of these, I can even get a BC on them, if you want?	iat up in
	Will know the weight, and could see how that is going to do at velocity and range!!
