That's what I (thought) I noticed with the 320-grain 9.3 solid which Michael tested. That bullet had some amazing straightline penetration! However, the 286-grain bullet with about the same shape didn't fare so well. I'm still scratching my head over that one! I could understand Michael's reluctance about testing roundnose bullets for practical reasons. They apparently veer so badly they wreck his test box! quote: Once again--This group is on the ball! You have taught me well! Thanks, Michael. But with me it's probably like the stopped clock that's right twice a day. 0Just curious, MIchael. Have you ever tested cap and ball revolver projectiles in your medium? I didn't notice it if you did. A growing number of people swear by the .44 caliber soft lead balls as being suitable for deer. At very close range of course. No, you are not starting a fight or argument. Speaking of the 358 Woodleighs--310 grs. I used to carry them along with my 358 STA when out in the bush. Always had some with "just in case". Back in the old days of straight wet print, they drove deep and straight as well, always driving through a 4 fb box at the time and out. I had those shooting spot on , 280 Swift I" hi and 250 Hornady 1.5 inches hi, and the 310 Woodleigh Soft spot on all at 100, windage perfect on that Win M70 358 STA I used to take with much of the time. Pick and chose the load needed for the job at hand. Never had the need for the Wood FMJ, but always had it. I think it's like the 9.3 FMJ, a good builet. Why the 286 is not, but same nose profile??? MY medium is tougher for borderline bullets to be able to penetrate straight, and that is exactly the point I want it at.

Dave

Not so concerned about the box, it's if the RN escape the box they do lot's of damage to the sound proofing on the walls, the ceilings, the lights and god knows what else because there is no predicting where they will go. Once Sam and I were testing and a RN found it's way behind our 25 yd bench about 10 yds past us! We searched everywhere for it, and walking back to the bench happened to see it in the floor! How? Who knows!

No never had a "Cap & Ball" don't know much about one. I am sure putting a 44 caliber ball in a deer will do ok. Hit them in the right spot I suppose.

### Tanz

I don't think more testing is actually going to tell us the "WHY" on the difference of the 286/320 Wood FMJ. They repeat the same performance, or more like behavior. Unstable bullets cannot be predicted. At times the same bullet may veer at 15 inches, and next at 25, or 30, the very essence of instability.

Recently I have found out that some VIPs in Africa have been testing as well. Not being satisfied with with the performance they have been receiving, they have began a test program much like we have been doing. The results they are getting is the same as what we have been getting also. Their test medium is different, stacked dry magazines. In the dry medium penetration is very much limited, as we would expect. Bullet behavior is the same however from what I am being told. In the near future I hope to learn more about this.

	The old FN vs RN is far more than just straight line penetration. Let us not forget the hitting capability of the FN solids. I have seen this first hand r many times and there is an extreme difference between the two and the trauma inflicted. On both elephant and buffalo it is clearly visible, you can trauma inflicted as the animals take the flat nose solids. Far more so than the RN. In fact I can't ever recall seeing much if any reaction to an anima RN other than "Crap, something stung Me" reaction. Hit'em with the FN Different story.	see

	I get a little lazy when it comes to moving to my outside 100 yd range setup here. Man, chronos, and equipment are all set up on the indoor range have to do anything except go and start shooting. Outside, have to start moving and setting up to get work done there. But, I must get some 100 accuracy in with some of our new bullets. 50 is excellent, but lot's of you want to know how 100 is! I do too. I am 99.9% sure of what the results v but still gotta have it to record and document!	yd
	Should be getting 9.3 and 375 #13s in this week soon. Dan has a fellow in his area that likes the bullets and took the 375s to the 100 yd test this weekend. Here is what Dan had to say about those this morning; quote:	
	quote. Trapper shot both of the .375 bullets in his .375 H & H Ruger #1 with better than expected results over the weekend. At 100 yards the first group fired was 1° with both the solid and NonCon and that was with a 9x scope. He shot them using a load right out of a Sierra reloading manual for 300gr bullets using IMR 4064 and got no pressure signs. The NonCon was 100-150fps faster than the solid and the POI was 2° higher at 100 yards. We are going to stretch them out to 250 yards to see how they do just for fun. We will also do some terminal performa testing with them when we get some weather to do it in. I think these may be good bullets to put tips in so we can see the difference in BC out to 600-850 yards	nce
	Looks like 100 yd accuracy is just not an issue with these!

RIP:         The only time I have had a chance to use a Woodleigh solid was on a big bull bison down in Kansas several years ago. I was shooting a .404. The was a 400 grain Woodleigh sort, the second and third shots were with Woodleigh 400 grain solids. The solids seemed to perform perfectly. I think has proven that the flat nose solids are indeed better. I am just saying I wouldn't quit hunting if all I had were Woodleighs. M.C.	Originally posted by 465H&H: AS Michael has admitted the RN steel jacketed solids such as the Woodleigh, do much better in game than what the test media would indicate.	
	Check out the latest issue of African Hunter Magazine for a report on my experiences with the Woodleigh RN solids on elephant shot from my 465 H&H and 470 Nitro doubles.	
	465H&H	
	465HH	
	ExcellentI don't get that magazine, but can it be seen online perhaps? Perhaps one of the Lurkers out there does get the mag, can make a copy and	pdf it
	to me? Fax?	
	HAin't nobody here don't know about your positive experiences with the Woodleighs! HEHCommon knowledge! As I have used the round nose barr my early days as well, and I never lost a buffalo or elephant either. Perhaps it's because both you and I live "Good Clean Lives" and we love our fellow	/
	man, and all that nonsense. Or perhaps you and I are just plain old lucky too! There are many cases where there are folks that have not been as luck you and I have been. Some are documented no doubt failures of bullets veering off course, there are many many cases not documented, lost animals	
	we will never know about. Miss? Bullet Failure? Suffice it to say, that the RN solids do in fact behave "Better" in animal tissue than in this test medium, however the same is absolutely true as well with the FN solids! They perform better in animal tissue. Both of these to the tune of 30-35% better base	don
	measured experiences. And, this also seems to correlate with not just my experience alone, but the reports I get from the field on a regular basis as w Of course that is a basic rule of thumbthere are occurrences in the field that cannot be duplicated or even anticipated in the lab, so we do the best w	
	can. Tanzan	
	Go back to the midway comments made on that bullet already. The one chap seems not so pleased, and he is singing the praises of the 350 FN and ev	(0.D
	the 400 FNHe's a CZ owner as well. But from what he says I don't think he understands that the FN is now discontinued?	/en

Posts: 8426   Location: South Carolina   Registered: 23 June 2008 M htchael: I sagree but I suppose they are thinking they will get blamed if a someone uses a flat nose bullet in a magazine rifle and it fails to feed at a critical mor am really, really hoping that they at least keep the flat nose bullets for the double rifle calibers. As you said, there are other good alternatives for mag rifles, right? Dave BRSS Chapuis 9.3.774 Chapuis 9.3.75 FL Krephoff SOU.	Some n't vhere eds, <u>Hide Post</u> vent. I
One of Us	Dave Can't always tell from the photos, but they do look a little pointy, first thing I noticed as well. Not a good sign at all. You know, I would not be so aggravated with Barnes if they would continue to offer both lines of bullets. But to discontinue what has proven to be on the best designs and nose profiles on the market, for a RN is just a disgrace and a sign in the face to performance. Offer both, let the people choose: 3 DA wants a RN so it will feed in his cheap ass rifle, fine. Others that need and chose the right buillet for performance. Offer both, let the people choose: 3 DA wants a RN so it will feed in his cheap ass rifle, fine. Others that need and chose the right builtet for performance it is available to them. 	yeah, when I run out of 350 FNs, not for a year at least, I expect to have plenty of choices. From the list you gave I would choose the Hornady, if I could get it to shoot reliably close to 350 expanding bullets. As a lead core bullet it is short enoug to be stablized by 16.5" twist.	gh

Target 03 was both together at 50 yards. The three lower left shots touching were the solids and the three upper right were the HP's. 1" total group size.

I don't think accuracy is going to be an issue with any of these bullets. Michael

	Michael and Cross,	
	Is this what you're looking for?	
	http://www.shakariconnection.chunter-magazine.html	
	Cross, the way I post links is to open another window and go to wherever you've stored your page. You've likely placed it in your bookmarks (in Firefr your favorites (AOL for example.) This should bring up the web address in your browser. Go to the web address which is showing in your browser. It be highlighted aiready, but if not right click your mouse and press Select All. Without moving your cursor away from the browser click Copy. Next come to your original page (that is, this one), open the Reply window, and right click your mouse and move down to where it says Paste. That should place web address right onto the reply message window. You can then write any message you want above or below your link, but you have to be careful n change any characters in the link itself. This sounds more complicated than it is, but it'll work!	may back the
	Hope this helps.

	Right you are, Dave. Though there were a few 'anomalies', like the 74" shot, that could use statistical reconfirmation.	
	More importantly, Barnes has thrown down a gauntlet: (quoting from the Midway product description) "These bullets have a wider meplat and are designed to penetrate large, dangerous game without deflection, even when striking heavy bone."	
	Well, that can be easily confirmed or REFUTED. Is there really some kind of elliptical 'wide meplat' that gets the best of both worlds? There were a coup	ole of
	RN surprises during Michael's year plus of testing. But can those be captured as a principled design, or were they just accidental static against the big picture?	
	In other words, is BB just blowing smoke?

<b>A</b>	I agree but I suppose they are thinking they will get blamed if a someone uses a flat nose bullet in a magazine rifle and it fails to feed at a	
	critical moment. I am really, really hoping that they at least keep the flat nose bullets for the double rifle calibers. As you said, there are other good alternatives for magazine rifles, right?	
	I do see your point. Barnes may be thinking they'd be liable for selling bullets which failed to feed, even though it may actually be the fault of the rifle.

	That 9.3 bullet from barnes had shaved down meplat to around 47% as I recall. The RN could not do much worse than that one. But I am certain the R won't do much better. Not to worry, I have a run of 9.3 #13s coming in this week. I had Dan run them at 280 for the solids and 255 for the NonCons.	Soon
	as they arrive I will make a plan to get some in the box at 2 different velocities in the 9.3 B&M to see how they do. I am sure they will be dandy! The o	
	superb 9.3 is the North Fork 286. They tested excellent, dead straight! So on barnes, they didn't have a 9.3 to begin with. Now the sure don't.	y
	Tanz	
	I think things are still confused between flat meplat and rn. I don't think they have their act together yet, and are just carrying over the "wider meplat	
	the old adverts. I saw the same. And on the website they had listed the FN solids, wider meplat for straight penetration and so forthnow what will t do on the RN with no meplat?? About all they can legitimately claim is this "the new RN Banded Solid will now feed reliably in your "CHEAP ASS" Danger	
	Game Rifles"? Barnes is Blowing alright, blowing smoke up someones ass! You know what pisses me off most? At the NRA show last year I was at their exhibition, they had some great black long sleeve T Shirts! I think I bough	nt 3-4
	of those and really like them. Now what do I do? I suppose I just can't wear those in public now where anyone might see them! OH, wait, I know-At bought a couple of those EXTREMELY nice North Fork "manly man" shirts! I can wear the barnes T under the North Fork and no one will see the barnes	DSC I
	That's it!

One of Us	Actually, the 'news' is already on the Barnes website store.	
	They now list both the flatnose and the RN solid. E.g., we have product number 33824 338 CAL .338" 250 GR BND SLD FB FLAT NOSE	
	Per 50 \$40.55	
	and product number 33825 338 CAL .338" 250 GR BND SLD FB ROUND NOSE	
	Per 50 \$40.55	
	For a season, at least, one will have to order the flat nose directly from Barnes, but Flat Nose are offically continued.	
	+-+-+-+	
	"A well-rounded hunting battery might include: 500 AccRel Nyati, 416 Rigby or 416 Ruger, 375Ruger or 338WM, 308 or 270, 243, 223" Conserving creation, hunting the harvest.

Oh, AND BY THE WAY--Not sure if anyone noticed my brand new "Lab Attire"??? Now I am somebody! Not exactly sure who just yet, but the name, so nicely embroidered on my "NEW" Lab Attire, tells me a lot!

Let's see, how does that saying go "I make this look Good"--or is it--This New Lab Attire Makes me Look Good? Not sure how that goes, anyway......Could not help myself.

Doc M

OK OK, Maybe I got a little carried away with this, but I figure after days and days of bitching, moaning, groaning about barnes and their stupid antics we could use some "comic" relief....HEH....
