	I copied this from Dr. RIP's ``49 Lapua aka 12.7mm (.500) Tornado″ thread – good stuffgood test work while Dr. MDM is off field testing CEB and NF bullets against moving targets.	
	quote:	
	Originally posted by RIP: The 49-10 Saga creeps along. Test fired yesterday for brass full-formed: Sorry. This Image Is currently Unavailable Detobucket Notice that the faster the bullet, the lower it hits (POI) on target at 50 yards, just like with a double rifle or handgun, less barrel time as the muzzle is rising in recoil. A heavier bullet load with more recoil and slower velocity would shoot higher, at this close range, of course.

	Some dimensions are proprietary, Cosmic Squirrel Top Secret.	
	Rep can do.	
	Ok I've dummied it up Ok, 230gr and 1.150" length gives .211 SD and should be around 250 BC; ought to work great in the 395 Ruger Max. I'm thinking a similar design stretched out to 260 perhaps 1.32" length - mas or menos – would work great from the larger capacity .395 cartridge longer range work. Might work fine on buffalo but definitely would work great on everything sho buffalo.	gr s for

	Jim, Word is in, the .395-caliber copper FBH from CEB is done. 240 grains, not 230 grains. SD = .220 BC: unknown, but good enough for 300-yard shooting at game, I am sure.	
	Reportedly the nose hole was made larger, hollowpoint diameter increased, since initial drawing That was a good move, I think, as lower SD will need more help opening up the nose at lower ve at long range. "SD drives expansion."	
	Hey, if the cup&core .308cal/150gr bullet (SD .226) is adequate for deer, a monometal copper .395/240gr driven fast enough should be adequate for elk and bison. 😂	
	The race is on to see who kills something first with the new bullet, Max and the .395 Ruger Max, or me and the .395 H&H. 😏	
	Will post picture of new CEB bullet when it gets here. Will post target photos from the .395 H&H	ASAP.
	Terminals on this bullet need to be done on elk, or bison, or anything else available. Posts: <b>28032</b>   Location: <b>KY</b>   Registered: <b>09 December 2001</b>	<del>c</del> "

	240grs is good, BC should be somewhere around 280 which is pretty good as well. Michael is ge phenomenal expansion and penetration performance from very light for caliber CEB hollow point bullets so I have no doubt the CEB 240gr HP Spitzer will handle everything on the North America continent as well as African plains game just fine.	
	Would be nice to see your .395/.338 Lapua with your best most accurate 240gr loading visit the for a full run against the bullet box mix with pressure traces attached.	Lab

	I figured since Michael was away I could show you these. After meeting Michael and seeing his wonderful cartridges I wanted to build a few guns. Now Michael at the time didn't know me well didn't offer to loan me his reamers. I wanted to build his whole line of cartridges so I starting do some design work from what I had remembered from seeing the B&M line. These are what I can with and I call them the Ultra Mag Shorts. The ones with the Barnes bullets are B&Ms and the or with the BBW #13s are the UMSs. The 458UMS will interchange with the 458 B&M but the others The calibers from left to right are 458,416 and 375.	oing ne up nes

	Very nice Sam!		
	Can you chamber the 416 B&M in your 416 UMS? Or are the neck lengths/shoulder angles suffici different that neither cartridge can be chambered in the other?	ently

	Sam,	
	Good work! You are a certifiable wildcatter. 🗳 🕒	
	Jack, I think those Ultimate Shadow stocks are quite cute.	
	Prefer them to walnut or laminate! 🖤 The "S" shaped lines on the butt must be "Shadow" lines on the "Ultimate Shadow" stocks.	
	Cute, punningly clever, not too gaudy. 😂 Those stocks are great, if you just move the forend sling base out to the tip of the stock,	
	where it cannot gouge your hand in recoil. Quite a short forearm, but not tacky and rubbery, it is smooth, hard and well textured in grip ar	eas:
	Sorry.

ora orows	Sam, Micheal	
Contrast in accord	What did Michael determine to be the optimum size meplat I remember 63% or 65% and does greater melpat reduce penetration. I am asking because I am shooting some 405 and 460 cast in my 45-70 with a very big, wide flap meplat.

	Just one of the mice here playing with the cheese while the cat is gone, IIRC, 67% of caliber by "stamped meplat" is optimum for penetration with a "nondeforming" bra Cast lead does not count, it expands, or shatters if cast too hard so as to be brittle, at usual bigbore rifle velocities in game. Even copper expands some.	ss FN.
	Brass at less than 2800 fps will expand very little. Oh yeah, those slow, heavy, hardcast 45-70 bullets tested in wet newspaper: Yes if you slow th down enough that the lead does not expand, then the smaller meplat FN that is big enough to shoulder stabilize, will penetrate farther. Yes that would be about 67%, according to MIB.	iem
	If the rifle will feed the meplat larger than 67% OK, larger meplat may be a better trauma transf agent in the shallower wound, stopping before exiting, and dumping all its energy.	er
	I think for all-around use, one should not go higher than 68% on FN meplat, for best feeding possibilities and best penetration. That is what a solid is for.	
	Otherwise use a jacketed cup&core or monometal hollow point soft or a cast lead bullet.	- 99

	Dave, Michael is off in Africa testing bullets! I think he would say 67 to 68 % meplat is the optimum size penetration and larger will reduce penetration some but more trauma from the larger meplat. W #13 you have so much more penetration than most other solids that if using in a double you can 75 to 80% meplat. 67% works good for feeding in a bolt gun.	ith the

P	Dave, Dave, Take a look at the work that Michael and Sam did with my 600 OverKill. They used CEBs at vario velocities but also tested other bullets from Macifej which have a much larger meplat and from RobGunBuilder which I call a "crayola-tip" because that's exactly what they look like.	us			
	So a wide range of meplat size from which to choose and compare.

	John,				
	I think Michael's trip, African hunting and family visiting plus Australian hunting, is around five				
	weeksor was it six weeks?? Heck I don't remember $\bigcirc$ But Sam may pipe in with the correct answer later this morning.
