Mike DSC DRSS (again) SCI Life NRA Life Sables Life Mzuri IPHA "To be a Marine is enough." Posts: 3577 | Location: Silicon Valley | Registered: 19 November 2008 ് 465H&H One of Us posted 30 June 2012 08:51 Hide Pos I think you guys are being too hard on ALF. In most cases he has agreed with the advantages of the non-cons and FN solids terminal affects on game. In fact he will be using them in the future at least the FN solids for sure. In fact you have agreed with the points he was making on the use of artificial media for bullet testing as a predictor of terminal affects on game. There are limitations on what can be predicted. Any artificial media is usually homogenous in makeup while animal tissue is highly variable. Does "wet pack" simulate what to expect when a bullet hits an elephants head? Not likely. Michael has often said that his media is tougher than soft animal tissue and that bullets will penetrate, if I remember correctly, 35% more in animal tissue. His didn't say that your opinion that CEB bullets cause larger holes in soft tissue than cup and core bullets was false but that since no measurements of wound size or volume were made that there is only observational differences and we know that may be correct but then again it may not. Volumetric comparisons of destroyed tissue between bullet types would settle that issue but wasn't done. ALF can be very hard to read as his writing is often very technical and sometimes obtuse. One has to work at understanding him. If you notice he never uses personal attacks when someone disagrees with him and seems to maintain a lot of patience in explaining complex theories to us dunderheads. 465H&H ്ര Posts: 5686 | Location: Nampa, Idaho | Registered: 10 February 2005 posted 30 June 2012 19:37 ne of Us н. I can truly say that the Alf posting today in the SD thread in the Reloading Forum is different that the Alf posting 2yrs ago in the TBP thread in thr BB Forum...same person just a much different written demeanor. Something that I believe must be understood is that Michael and others who are using the CED, GSC, and NF Monometal FN Solids, NonCons, and Expanding bullets are not going to be using RN bullets on their expensive hunts so there will not be necropsy photographs of RN bullets - solids or softs - alongside necropsy photographs of their monometal results. If someone is waiting for the RN field necropsy results they're going to have to supply them themselves. I believe everyone knows and understands that Michael's laboratory testing of his 'wetpack', pressure and velocity testing followed by in field necropsy results from use on game doesn't meet the 'scientific' requirements of testing BUT they're the best that any individual not supported by the government or some scientific organization through direct funding or grants has ever compiled and shared with the hunting world. In that prospective I believe Alf needs to cut Michael some slack and understand this work has been paid for directly from the individual's pocket who is posting the results...no grant monies here You are correct that Michael has posted that his 'wetpack' bullet box testing is far more durable that live game...he said as much 2yrs ago in his discussions with Af on the TBP thread. Michael has always been upfront in the expanding bullets and solids will both give a greater depth of penetration - by a set average percentage for each bullet type - in live game than in his laboratory testing. I believe your stated 35% greater penetration figure relates to expanding bullets with solids being quite a bit more, upwards of 80% - but this is off the top of my head so likely is wrong. But there is a relationship between the two uses that has been established through measurements in the field and in the laboratory. That is more than sufficient for most of the readers and participants in the TBP thread...which may account for our gruffness towards individuals when they discount the work without producing bullet test work and game necropsy of their own efforts to back up their disparaging remarks. I haven't proofed this post as I haven't had my 1st cup of coffee yet so sorry to all if the post is disjointed or full of typos. Edit: I'm drinking my 1st 🕰 so starting to proof my earlier post. 	Alf has his own personal agenda. Any inconvenient truths that confront him are easily ignored by Alf, so he can continue quoting textbooks.	
	He deletes all his old posts here so the new posts here, though same-old-same-old, appear as some sort of new posting, and he gets to tally up his post count.	
	 I have traded textbooks with Alf through the mail.	
	I mailed to him a copy of Duncan MacPherson's out of print book BULLET PENETRATION in exchange for a pile of papers on internal ballistics. I thank him for educating me.	
	I have had college physics and engineering courses, and can follow him, but there comes a time to accept progress.	
	Proven field results of the quantity and magnitude, i.e., QUALITY, presented by MIB/CEB/B&M related threads:	
	There is just no reason to theorize "why" it is impossible.	
	Alf and Terry Wee-wee-land are two peas in that pod.	
	Alf should be directing his intellect toward theorizing "why" the Non-Con terminal ballistics are so good, not "why" it is impossible.	
	At least his twaddle would be more interesting then. Sounds petulantly childish by his current approach.

	н,	
	I'm working on my 2nd so haven't reached the hyper stage yethave a BD party with grandkids later today so I definitely have to work on getting the	
	I don't believe anyone will take your post as being critical of Michael. Alfwell Alf will be Alf though the current Alf is much easier to understand than th earlier Alf. And contrary to some, I did catch his post 2yrs ago that he does use FN solids so he already understood their benefit.	e
	I believe the major disconnect 2yrs ago was initially that Alf didn't understand that Michael understood his lab testing didn't meet scientific standards b that he (Michael) had 10yrs+ of bullet performance necropsy on game animals that supported the similarity of the bullet performance within his 'wet pa	ndards but s 'wet pack'
	work once he worked out the best 'wet pack composition'. Michael understood the differences in within-mass performancethe differences being great penetration within game animals than within his 'wet pack'. And later before Alf's departure from the thread, I don't think that he (Alf) understood that	ter
	Michael had zero interest in revising his lab work to accommodate acceptable scientific protocol notwithstanding the great expense that would have entailed.	
	Alf has great scientific interest and is also a hunter. My impression which may be totally wrong is that Alf mentally runs the proverbial 'teeter totter' in h mind between hunting and the science behind hunting at least as it relates to terminal bullet performance.	his
	Michael's interest in terminal bullet performance is that of a hunter not a scientistmore like zero interest in the science behind the terminal bullet	
	performance. And his lab work was/is only an outgrowth of that hunting interest to identify better performing bullets towards eliminating the variable of poor (based upon historical field/game necropsy) or potential poor bullet performance in the field (based upon the bullet's performance within his 'wet	
	pack')nothing more, nothing less.	-
	If Alf is accepting Michael's bullet performance work will never ever met scientific standards because Michael has no interest in meeting these standard and that mindset is unlikely to change, then I doubt that Alf and Michael will have any disputes.	s,
	Anyway that my reading of the 'tea leaves'right or wrong. Now it's time for a 🕮 refill 🔀

	I think the question of why the non-cons cause more tissue destruction than cons is of importance. I will caution though that this improvement is based	d on	
	visual observation which always leaves some question as to its validity.		
	Assuming that they do cause more terminal damage, here is a possible theory:		
	We know that if a second bullet hits an animal in exactly the same hole as the first bullet the total amount of tissue damage will be less than if it had h another part of the animal. When the petals leave the bullet path, they are encountering fresh tissue that hasn't been traumatized by the main part of		
	bullet. Ergo, increased amount of tissue damage.

		You are right. The -8" drop is relatively easy to deal with, especially with rangefinders these days. But the 12" sideways slide in a 10 mph wind starts push things into the marginal zone.	to	
		It would be good to cut that down to 8", too.

One of Us	Sam came do	w for a visit yesterday, and as normal we managed to get a lot of work done. Just so happened that the new North Fork FPS (NEW NOSE PROFILE) p re. These were sent for my approval, as RIP and I have an order in, .500 caliber. These were the first in .500 caliber done with the New Nose Profile th		rived
MY -	changed to in	n ALL CALIBERS, not just .500.		
-	Nose Project	00 caliber only, in comparison to the BBW #13, the North Forks have a slightly longer Nose Projection than what we designed for the .500s in the BBW # ion, has become a factor in depth of penetration. The Nose Projection on the North Forks is around .680 on the 375 NF FPS, and around .700 on the 45 that here, give or take a bit, John could give you exact numbers if wanted. I also suppose that this nose projection carries out in other calibers, which	50 NF FPSAs	s best I
	The New Nos	e Profile, very similar to the BBW #13 as you can plainly see, but is not an exact 13 degree angle, is a superior solid to the older version nose profile in	every way. I	I will
	projection th North Fork is	hat it is the absolute equal of the BBW #13 without a doubt. If compared directly, there is a 375 BBW #13 and the 375 North Fork, because of the sligh e North Fork will penetrate deeper. In the case of lets say the 500 BBW #13 compared to the 450 North Fork, because of Nose Projection, and velocity the dead equal to the 500 BBW #13. This falls true in the 50 B&M where the 500 BBW #13 can be run to 2150 fps and the 450 North Fork yesterday at 00 MDM the 450 North Fork fell just short of the 500 BBW #13 slightly. All intensive purposes, and not counting an inch here or there, very equal.	in this case, t	the 450
	We now have	e two Solids for our choosing that really cannot be equaled in Performance anywhere in the world as far as I am concerned. What you choose is up to ith the BBW #13s and North Fork only in the future, there is no need to look elsewhere. No bullet company out there supports you like these two comp	you, I will be	working
	are Performa guns. I teste	nce dedicated. North Fork by changing the meplat size down to 68% of caliber has now joined the ranks of proper performance, but also feed and fund d three different rifles yesterday, Of course all Winchester M70s, and worked them hard, slinging brass against the wall on the other side of the range	ction in our bo , feed and fur	olt nction
		lick as can be, did not even feel a bump in 50 B&M Super Short, 50 B&M, and 500 MDM. ŻERO issues on that front, of course with a proper rifle. I canno		
	Let's get sta	rted, and show you what we have.		

The final version of the old nose profile was changed to 68% of caliber, feed and function was 100%, with zero issues, and depth of penetration was increased by a measurable and consistent margin. This was the bullet adopted at that time, I still have many of those as well.

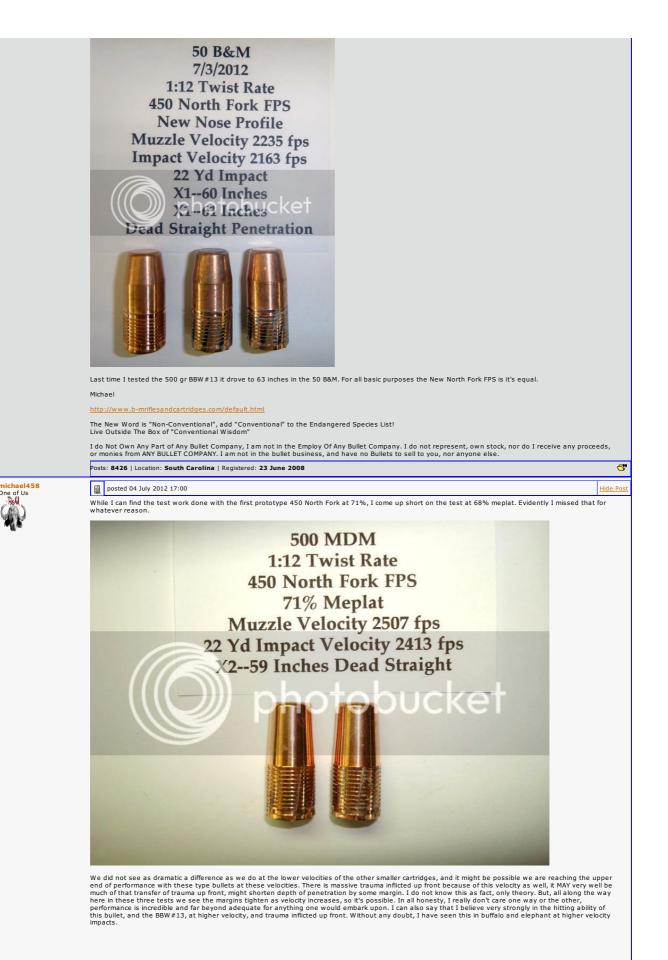

Dropping the meplat size down to 68% was a success, in both 100% feed and function, and a marginal increase in depth of penetration. All as it should have been, and expected.

Now enter the 450 North Fork FPS, New Nose Profile, and yet again an increase in performance, and feed and function 100% perfect.

	Found some more recycled drollery from Terry Wee-wee-land in the Summer 2012 issue of <b>AFRICAN HUNTING GAZETTE</b> :			
	PP 128-129:			
	<b>Expanding Bullet Update</b> "In it's least exact form, terminal performance is measured by whether you got the animal.			
	If you did, the bullet performed admirably; If you didn't, it didn't. This presupposes the animal was properly hit, of course."			
	Such a clever wordsmith, that Terry! 🐨			
	"As the premium-bullet market has matured, we predictably find marketing people trying to turn vice into virtue. For example, the argument that a bullet will expand, the claws will fly off, and behave like shrapnel, penetrating at different angles into the vitals of the animal."			
	"Anyone who has examined a wound, or even the penetration channel of a medium such as soaked, compressed newsprint (which is the closest we can come to duplicating the characteristics of animal tissue) Yes, Terry actually wrote that.			
	knows that claws, when they have broken off, merely litter the wound channel." Reckon Terry is just imagineering his bullet tests in wetpack?			
	"They don't penetrate like shrapnel. How could they? They are oddly shaped bits that weigh a few grains. Meanwhile the bullet has less weight with which to maintain its momentum."			
	"The shrapnel argument is purest hogwash, invented by marketing people to to sugar-coat poor performance."			
	Skip to last sentence of the article.			
	"And avoid any bullet that claims a "shrapnel effect," or which emphasizes long-range accuracy rather than terminal performance."			
	There is no way for Terry to have his cake and eat it too. Poor Terry.

	yes!			
	The "mistakes" made in the interpretation of the tests are numerous but most probably the greatest error derives from the fact that behaviour reported that are not tested for.	s are		
	As I have tried to show over and over it is a two way street.			
	Only the bullet behaviour is tested for in the simulation, not the target behaviour and even then only certain behaviours not all.			
	So if there is comment bullet expanding or fragmenting etc etc then that part is ok, the minute there is reference to the amount of trauma done paper stack or gelatine or reference to this likely being a better killer than that, as observed by the amount of damage to the target then the t no matter how many times over you repeat the test !	e to the est is invalid,		
	It is a systematic error in the methodology employed.			
	Yes I agree that the amount of damage to the target material would constitute a measure of lethality in living tissue but sadly simulation testin test for this this is the problem and people do not seem to get this.	g does not		
	The hole you see in gelatine and the hole in paper after shooting is not representative of the amount of damage done in various tissues. This i science in ballistics is so important.	s why basic		
	Just to illustrate here is a picture posted from the terminal thread			
	This is the "trauma" done to the paper.			
	Simple questions:			
	1. What caused this damage ? By that I mean by what mode of action did this occur?			
	2. Do you see this behaviour in living muscle, or bone or organ tissues? In other words if you shoot your animal do you see this destruction an devitalized tissue ejected from the target ?	d mass of		
	This whole thing to me is amazing because this thread on terminals is so important it has been made a permanent fixture on AR.			
	So anyone wishing to find out about ballistics who googles Terminal behaviour is going to get this popping up on their screen. They may actual that what they see there is how things happen ?	ly believe		
	I cannot wait to see some kid at school presenting this for fact when asked to write a term paper on ballistics !

		Expanding Bullet Update	
		"In it's least exact form, terminal performance is measured by whether you got the animal. If you did, the builet performed admirably; f you didn't, it didn't. This presupposes the animal was properly hit, of course."	
		Such a clever wordsmith, that Terry! 🔞

F	le re	ally is a wee-wee. Now in the good old days, he would just eat his hat like Mike Fink , King of the River.	
li	iably	someone who subscribes to one of these mags needs to write a 'letter to the editor' and complain of poorly disguised slander. Those mags bords irresponsible. Keep it short and suggest that Terry hasn't tested and doesn't know what he's bad-mouthing about. A senior editor with some bra would ask Terry to do a study in retraction or fire his ass.
