Now in this photo take note of the two sticks Hoot stuck in the entrance and the exit. Today Hoot says that was measured and it was 5.5 feet between entrance and exit. I imagine that North Fork is still going--Wonder if Hoot was shooting east or west? Hmmmm?

Congratulations Hoot! You went to the field prepared, and with the right equipment, and you were successful! As it should be. Hoot has also decided to come visit with us at DSC, so we look forward to seeing you there! Michael

	Would be good to have a list of PH's who endorse this bullet profile.	
	Thats easy, All the PHs that have seen it work that I know of thus far, to the man! Either BBW≢13 or the new North Fork.	
	quote:	
	quote: I wonder what other designs and phenomena we can discover.	
	I know there are things out there lurking around, but it is going to be very difficult	
	to improve on what we have accomplished already. I know II and pretty planead and I am not looking too hard anymore, I feel like I am exactly where I need to be.	
	One of the things that I am looking at is lighter for caliber #13 NonCons, in the big bores. I did this 250 gr. 458, and I am very pleased with it, amazed actu believe for anything short of buffalo this will do a heil of a job. I want to look at something like this in .416, maybe .474, and I already have an excellent 300 .510 has a 350 that we just did as well. These bullets are extremely capable.	
	Next buffalo shoot I go on as well, I will be looking at lighter than normal for caliber #13 NonCons and North Fork CPS.

	That 250 gr BBW #13.458 ran 2860 fps in the 458 B&M, at 50 yards gave an incredible 18 inches of penetration. In the 458 BM Super Short at 2700 fps at 5 inches. That is more than all conventional 458s up to 400 grs. At 18 inches it is borderline buffalo, a 500 Nosler Partition only went 19 inches, 500 Woodleig inches, both those from 458 Lottl Just to give you an idea!	
M.V.	I would not hesitate to use that bullet for many different missions! This is why I think we need to look at a very light 416, I have not run numbers yet and j

	Nice going Mike. Looks like you hit the ele in the correct spot. Amazing though how tough it is to get that brain. I still haven't done it completely satisfactorily.	
	Todd,	
	The head shot from the 470 knocked the elephant down, I hit it again immediately. It got up and four shots later it was down. It lasted only a few seconds.	alf a
	I have the buffalo shooting down pretty good. The elephant still gives me fits. I shot a little too high on this one. In the jesse at about 12 yards I had about a h second to decide to shoot or not.	iair a
	We are at Nehimba now. I will finish the complete report early next week. We have had a great experience this trip.	3

	Mike		
	Yes,	to the best of my knowledge you are the first to use those Copper NonCons.	
	410	B&M, have a reamer so it is possible. Has not been a rifle built yet. No problem building a rifle, biggest issue is the dies, Hornady is taking about 6 months + , and that is after a rifle is built and provide them some chamber fired brass.	right
		, and that is after a fine is built and provide them some chamber ned brass. ould be an ok cartridge/rifle, there is no doubt about it, I have tested those bullets too, and nearly built one based on nothing but those two BBW#13s! But	
	bette	er sense prevailed, since 1 personally was invested in 416 already, I really could not justify it, especially with so many good 416 bullets flying about. In the e S aside, I really think you are better off in 416, far more versatility in just bullet choice and I am increasing that after Dallas.

	225 yards max for PH size.	
	Eventually Buff, but at much closer range of course.	
	The FN would be for Elephant or even in Ele country.	
	Might use the FN on smaller game at close range for less damage.	
	Would like to use two bullets to cover everything.	
	ie a NonCon & #13 FN.	
	It's a Mauser thing, you wouldn't understand.

MAN AND	In the 404J would there be any advantage to using the	
	375gn NonCon & 400gn FP over the 325gn NonCon & 350gn FP?	
	Hi Allen	
	I concur with some of your other comments;	
	quote: The lighter bullets would run a fair bit faster & from what	_
	I'm understanding these low speed.	
	And since the lighter for Caliber NonCons are doing so well	
	in other calibers.	
	From everything I have seen thus far, if it were me, I would be using the 350/325 #13 Combo, running velocity up on both NonCon and Solid. I have never r with a 4041, so not really sure what can be done, but I am sure you can run them more than fast enough to do the job, elephant, buffalo, hippo! No doubt a velocity increases trauma, and penetration, both from the NOnCon and the Solid as well. One of Us	posted 13 December 2012 01:38	Hide Post
	I have a couple of reports for you guys.	05 #12 in
Mar.	First from our own 450NE. He has been hammering poor little deer over in TN now for some time, with both 458 B&M and 50 B&M. He has come to like the 29 his 458 B&M pretty good for this workUNTIL TODAY. First time he had one run off on him!	95 #13 III
	Yes, he hit the deer, and it ran off!	
	\mathbb{Q}^{2}	
	When I asked how far? 2.5 Inches!	
	Here is another report, and an ugly photo to go with it too.	
	This is from "Bob", and I am just quoting an email he sent below.	
	quote:	
	Medium Caliber CEB Raptor Report on Smaller Big Game-	
	Results from 176 grain .338 ER Raptor-CEB. Fired from .338 Win Mag at about 2,900 fps. Whitetail doe taken at about 80 yards broadside, deer facing the left. Impact on L shoulder blade, about 1/3 the way up from the lower "ball end". Animal dropped at the shot.	ı to
	Entry shoulder blade was pulverized for about 2" in diameter, 3" entry hole under L shoulder through rib cage, as shown in photo.	
	NOTE: the left leg was 'butterfly cut' in armpit and held up above back for photo. You can see the neck muscles curving up at far left side of photo for	
	reference.	
	Lungs were s-h-r-e-d-d-e-d totally- shot went above heart- no damage to it. Exit hole in R side of rib cage identical to entry in appearance, but about diameter. Base continued on and exited R shoulder blade, pulverizing it in a mirror image of L blade. Recovered one petal from far side, against inside	
	R shoulder blade.	
	Wadcutter type caliber-size hole in hide on both sides. If it had not been opened up and examined carefully, you would not realize the extent of intern destruction.	nal
	Ugly Photo	

about in the bush there could be a new threat to us, a new "Dangerous Game" we need to be aware of. I do not have all the details as of yet, but will report as soon as I gather more alarming photos today. Prepare yourselves;

Michael

	Those damned Apes !	
	Zim first, then the rest of the World.	
	I'll be sending an urgent message to Dan to get those bullet cutting machines working round the clock so we can stock up in readiness for the onslaught.	
	I'll be specifically looking for this bloke who should be easily recognisable from the Weatherby eyebrow he's about to get 1.

A COL	Planet of the apes!	
	Humanities threats have grown Terminator robots, zombies and now baboons! Need some counter baboon snipers to deal with this threat.

	Hey, that is a good thought, new B&M Tech! Looks like a small bore rifle to me, and I damn sure can't shoot for shti with those! Holes are way too small, barrels skinny! Maybe he can send a resume along with sample targets, hire him on a contract basis to help me get small bore testing done???? Hmmmmmmm?	too
