	Driginally posted by michael458: I have some test work planned for .500 caliber, and thought I might get to it this week However, with last weeks ice storm, and lots of cleanup work to do here, trees, branches, limbs that need to be sawn up, piled, and later burned I am not sure when I am going to get to it Maybe next week or later. Running solids in .500 from 450, 475, 500, 525 and 550s in the 50 B&M, 500 B&M and 500 MDM 4 different lengths of nose projection from .558 on the first and early 500#13 Solid and 550#13 solid, 475 & 525 #13s at .600, 450#13 at .650 and I believe the 450 NF is closer to .700 nose projection I personally at this moment don't think there is going to be much difference that can be attributed to nose projection, more attributed to weights and velocities of the different bullets in the different cartridges My personal interests in this exercise is the fact that I plan on taking the new 500 B&M to the field in Zimbabwe in June, and I want a good solid to match up with the various #13 HPs with tips added, and NF Expanding CPS if I can get POI correct with these But this cleanup has to come first, plus I have actual work type meetings here this week	
	Any progress Michael? Boring day over here.

	Capy Netl, ho progress on the terminal tests, that's for sure, Have been pretty lied up here since cleanup has finally been completed. Been shooting every day this we tay a not server this year, and one 500 MMB going to a PH in Zimbabwe, so those things have top priority currently	idy 5, I ing and os, ot of

Now, I moved up to 25 yards to get POI on all three, I think I could have shot a little better here as well, I was in a bit of a rush I think.....

146 Leopold

	25 yards 25 yards Cohotobucket 250 Socque • 250 Socque • 250 Socque • 250 Socque • 250 Socque •
	p: Pressure: Humidity: Wind: Range: 25 yds
	I will be working on these and some of the other projects for upcoming weeks right now, not sure when I am going to get to those terminals, still on the books to be done, but priorities are elsewhere right now, and for the next couple of weeks or so anyway

303carbine One of Us	📓 posted 01 March 2014 03:24	Hide Post
	I did some testing with my 45-70, the bullets were 420 grain gc cast bullets. I tried to recover bullets to see how they perform on railroad ties.	
	I punched clean through 7 ties only to recover a bullet that hit a big knot in the backstop. It flattened sideways but didn't fracture as I thought it would.	
	I have ony recovered the one cast bullet in all the years of shooting 45-70. My 1886 Winchester 20 inch carbine launches those big pills at 1640 fps, big holes, no tracking.	
	Free speech has been executed on the altar of political correctness.

	Doc M,	
	Just for yuks get a load of this: The Pommies were experimenting with a "400 B&M Extra Long" (400 B&MLE) 😂 about a century ago.	
	Early 1900s British wildcatting shown by George A. Hoyem: History and Development of Small Arms Ammunition Volume Three (Pittic Foratine Pille Cartificae)	
	Volume Three (British Sporting Rifle Cartridges)	
	.400-3 1/8" RIMLESS	
	The rifle experimentally made for this long, rimless case must have	
	chambered the cartridge on the case mouth because it has only a	
	slight taper, not enough to assure proper headspace. This load	
	does not appear in any British references and King's Norton Metal	
	Company lists or catalogs have not been located. The upper round	
	is a softnose bullet specimen, the lower has a nickel coated solid.	
	The headstampKNM Cois the same on both. Most likely developed in the early 1900s, it never went beyond the experimental	
	stage.

michael45 One of Us I went with the 2400, gave the best velocity's and the least amount of dispersion. 296 fair well but did not give the velocity's I was looking for, the 2400 load can be bumped up a grain safely IMO but the slight gain in velocity and short time window I am sticking with the existing load.

Now onto the the Longshot story, this was a load I put together for the first run of the 200's, they were slightly sticky but nothing crazy but gave good velocity, the bands are completely different now then before, well firing this load the brass was ballooned at the rear of the case just a little bit of pressure 🔮, Its a good powder but I believe there are better for this bullet, like we have seen with 4100 and 2400.

്ര

Have some "rat bore testing" as Michael likes to call it and then some final tweaks with the 1911 and we will be off to slay some pigs.

Simply, Elegant but always approachable

## posted 07 March 2014 14:33

Long time ago I decided to not mess with .429 and all my work is with 45 Colt. I have a Winchester 94 in 45 Colt that I have had for years now. I have run some pretty mean stuff through it over the years, and it has even been to Africa a few times playing around, makes a nice camp gun, and makes a fine truck gun, very handy...... Also, I am old school and just don't get into load data for handgun cartridges to speak of, if I can't do it with Bullseye, Unique, and 2400 then it just don't get done. For these heavier loads in my Winchester 45 Colt I use 2400 as well....

I have a few of those 240 Raptors in 45, I used from 20-24/2400, 23 gave me 1776 fps and 24 gave me 1830 fps in my Winchester, both heavy loads, in fact 24/2400 I figured was Over Max... 23 at heavy, so I settled at 22/2400 for a nice easy 1725 fps, but this is a 240 gr CEB Raptor.... Gave excellent terminals in the test work.

Of course I had to play with the 150 Raptor as well in 45 Colt and the little rifle, 29/2400 gave me 2158 fps, but I think its a bit much, dropping to 28/2400 for 2091 fps, 27/2400 2017 fps and probably the best load overall.... All these in the Winchester 94. Again, very interesting terminal tests.....

I love carbine rifles in handgun calibers, for general purpose use around the house, and handling. I have been busy the last little while with getting things put together for several of these little carbines, and still have a good bit of work to do next few weeks with them......

Mighty fine 100 yard group you have there with that Marlin 94... Not shabby at all.....

Michael

	bullet have a place heregiven it's lower shear velocity. I am guessing the SOCOM may have to be single loaded for lever action use. Or, alternatively, the tip may have to be removed for use in a lever action magazine tube. Which way should I go here, guys? Regards.	
	Mike Just a couple of months or so ago I ordered 750 of the 250 Socoms Mostly for my 458 B&Ms But with a mind to try some in the 45/70 I ordered t entire lot Without Tips, and Talon Tips separate I seated a couple just to see and make sure they would work through the lever guns, and they do NO TIP	
	of course I have yet to load any however in the 45/70. I did however load the 250 #13 Raptors in 45/70, and in a Marlin 18 inch gun I was able to touch 2400 fps with t	hose,
	and a good dose of RL 7. Everything seemed to work just fine, and I would load exactly the same with the 250 Socoms	,
	I am of the opinion that these two bullets, and I am partial to the Socom, will turn the 45/70 into a completely different animal I believe the 45/70 will be incredibly enhanced with this bullet.	
	I have NO DOUBT at all, that in my 458 B&M and B&M Super Short, that this 250 Socom can handle any thin skinned animal that walks the planet, including all lions, leopards, moose, and plains game and anything in between. And at 2350-2400 fps in a 45/70 it absolutely has to take the 45/70 into new territory	bears,
